Philosophy begins in wonder. And, at the end, when philosophic thought has done its best, the wonder remains.

Alfred North Whitehead, 1934, p. 96

For some years now I have been intermittently writing and wondering about wonder as an untapped potential in qualita tive research. This special issue provides an occasion, or a pre text, to return to the subject, concentrating on the capacity for wonder that resides and radiates in data, or rather in the entan gled relation of data-and-researcher. I think we need more wonder in qualitative research, and especially in our engage ments with data, as a counterpart to the exercise of reason through interpretation, classification, and representation. These latter acts still constitute the staple repertoire of "conventional" inquiry (cf. St. Pierrein press). I do not dismiss such acts as necessarily unworthy or invalid. But in line with recent Deleuzian theory (e.g., Deleuze, 1994; Massumi, 2002), I consider them to be second order operations performed on the flux and movement of the world. They make things stand still and separate out, so that meaning, structure, and order may coalesce. The problem with such "typological thinking" (DeLanda, 2002) is that it is obsessed with sameness and the establishment of fixed, hierarchical relations among entities. It can only conceive of difference in terms of opposition between already stabilized entities, rather than addressing the manifold movements of difference "in itself" (Deleuze, 1994, p. 174) and therefore cannot open onto the new or the unanticipated. From this standpoint, data have no status other than that of

tive rpotalrethan that of

MacLure 229

Wonder is also preeminently material: it insists in bodies as well as minds. Daston and Park (2001) describe it as a "cognitive passion, [emphasis added] as much about know ing as about feeling" (p. 14), and they suggest that its his tory is "tightly bound up with other cognitive passions such as curiosity and horror" (p. 15). We may feel the wonder of data in the gut, or the quickening heartbeat, as well as in the cerebral disappointment of failing to find the right code or category in which to park a particular piece of (what now presents itself as) data. Wonder is not necessarily a safe, comforting, or uncomplicatedly positive affect. It shades into curiosity, horror, fascination, disgust, and monstrosity. And the particular hue or tenor that it will assume is never entirely within our control. But the price paid for the ruin caused—to epistemic certainty and the "sedentary" achieve ment of a well-wrought coding scheme or an "arborescent" analytic framework—is, according to Massumi (2002, p. 19), the privilege of a headache. Not the answer to a ques tion, but the astute crafting of a problem and a challenge: what next?

Wonder is relational. It is not clear where it originates and to whom it belongs. It seems to be "out there,"-ema nating from a particular object, image, or fragment of text; but it is also "in" the person that is affected. A-pas sion: the capacity to affect and to be affected. When I feel wonder, I have chosen something that has chosen me, and it is that mutual "affection" that constitutes "us" as, respectively, data and researcher. In contemporary-mate rialist terminology, wonder can be thought of as entangle ment or "intra-action" (e.g., Barad, 2007), or the movements of desire and intensity that connect bodies—human and nonhuman, animate or inanimate, virtual and actual, including bodies of knowledge—in/as an assem blage (Deleuze & Guattari, 2004). We, and the data, do not preexist one another.

I first got interested in wonder through some chance encounters with images of the "cabinets of curiosities," or wunderkammern that were assembled by princes, mer chants, and clerics across Europe from the 16th to the 18th

century. These collections were themselves liminal c3C 0.01-5tutnetcoD 148- thevr0 TwID 151 >>BDC that hass e, and the data, do96ance e, and the data, do9 18th -ls nct -1rvoID 149 >lie /SpanCbounda]TJ ou/Mskw -2[aoabTpL 168 of the data is not -1rvoID 149 >lie /SpanCbounda]TJ ou/Mskw -2[aoabTpL 168 of the data is not -1rvoID 149 >lie /SpanCbounda]TJ ou/Mskw -2[aoabTpL 168 of the data is not -1rvoID 149 >lie /SpanCbounda]TJ ou/Mskw -2[aoabTpL 168 of the data is not -1rvoID 149 >lie /SpanCbounda]TJ ou/Mskw -2[aoabTpL 168 of the data is not -1rvoID 149 >lie /SpanCbounda]TJ ou/Mskw -2[aoabTpL 168 of the data is not -1rvoID 149 >lie /SpanCbounda]TJ ou/Mskw -2[aoabTpL 168 of the data is not -1rvoID 149 >lie /SpanCbounda]TJ ou/Mskw -2[aoabTpL 168 of the data is not -1rvoID 149 >lie /SpanCbounda]TJ ou/Mskw -2[aoabTpL 168 of the data is not -1rvoID 149 >lie /SpanCbounda]TJ ou/Mskw -2[aoabTpL 168 of the data is not -1rvoID 149 >lie /SpanCbounda]TJ ou/Mskw -2[aoabTpL 168 of the data is not -1rvoID 149 >lie /SpanCbounda]TJ ou/Mskw -2[aoabTpL 168 of the data is not -1rvoID 149 >lie /SpanCbounda]TJ ou/Mskw -2[aoabTpL 168 of the data is not -1rvoID 149 >lie /SpanCbounda]TJ ou/Mskw -2[aoabTpL 168 of the data is not -1rvoID 149 >lie /SpanCbounda]TJ ou/Mskw -2[aoabTpL 168 of the data is not -1rvoID 149 >lie /SpanCbounda]TJ ou/Mskw -2[aoabTpL 168 of the data is not -1rvoID 149 >lie /SpanCbounda]TJ ou/Mskw -2[aoabTpL 168 of the data is not -1rvoID 149 >lie /SpanCbounda]TJ ou/Mskw -2[aoabTpL 168 of the data is not -1rvoID 149 >lie /SpanCbounda]TJ ou/Mskw -2[aoabTpL 168 of the data is not -1rvoID 149 >lie /SpanCbounda]TJ ou/Mskw -2[aoabTpL 168 of the data is not -1rvoID 149 >lie /SpanCbounda]TJ ou/Mskw -2[aoabTpL 168 of the data is not -1rvoID 149 >lie /SpanCbounda]TJ ou/Mskw -2[aoabTpL 168 of the data is not -1rvoID 149 >lie /SpanCbounda]TJ ou/Mskw -2[aoabTpL 168 of the data is not -1rvoID 149 >lie /SpanCbounda]TJ ou/Mskw -2[aoabTpL 168 of the data is not -1rvoID 168 of the data is not -1rvoID 168 of the data is not -1rvoID 168 of t

fragments and relics painstakingly slotted and fitted into the earning." We are currently planning work involving elected space, heavy with meaning, of a secret roombabies and objects in museums and galleries. (Mauriès, 2002, p. 12)

Conclusion

laborate in the production of wonder. Builsita characterisarrived out of the blue. It contained a poem.

Object

for Maggie and Rachel How a thing becomes itself, wide awake as anyone

and faceless. How it is born from matted feathers.

shreds of paper, red rubber bands and a small

four-eyed bone button. It is not a doll or a body. Not a god.

Something tiny there shining is the thin flight

of its name, the way of a warrior. Or a miniature pleasure

machine mixed from the dirt under her nails, her own

scat and spit. It will sit and mourn with her for days,

days when she's breaking and tearing. Like a flower

it is burning a hole in the room and someone has seen.

It will be confiscated. How her confiscation begins.

Ultimately, we cannot know where wonder resides—not simply "in" the data; but not only "in" us either. As noted at the outset, it is both material (resonating in bodies; indis sociably attached to the materiality and the singularity of We cannot force objects, nor any other kind of data, to colobjects) and virtual—a matter of potentialities and thresh olds. Perhaps the best way to think the wonder of data then, tic of wonder that its effects, and affects, may issuen their capacity to enter into relation with researchers, is as unexpectedly, if we are lucky. A couple of years ago, a fewanevent. "To the extent that events are actualized within us, days after a brief and unplanned conversation about owney wait for us and invite us in," Deleuze writes (2004, research with a colleague who is also a poet, an e-mail 169). But we need to be attentive and open to surprise to recognize the invitation; and once invited in, our task is to experiment and see where that takes us.

Declaration of Conflicting Interests

The author(s) declared no potential conflicts of interest with respect to the research, authorship, and/or publication of this article.

Funding

The author(s) received no financial support for the research, authorship, and/or publication of this article.

Lesley Saunders

The wonder of objects has continued to take us to new places. In addition to prompting further research publica tions, including this one, it led to an art exhibition, "Curiosity and Classification: Objects as Incitements to Theory," to accompany the 2011 Summer Institute in Qualitative Research. Sinead's collection was exhibited alongside the work of six other artists, and one of the eight cabinets was filled by objects made by conference delegatesere was a joint video seminar with colleagues and graduate students at Deakin University, Australia, on "Objects, Spaces and
